TITLE: Chlorpromazine therapy of post-traumatic psychoses

SOURCE: Meditsinskiy zhurnal Uzbekistana, no. 9, 1964, 82-85

TOPIC TAGS: neurology, nervous system drug

Abstract: Chlorpromazine is beneficial for new and persistent forms of post-traumatic psychoses and Korsakoff's syndrome. It is effective in post-traumatic epilepsy only when combined with Brodskiy's mixture [formula not given]. Prolonged supportive outpatient treatment with small doses of chlorpromazine and Brodskiy's mixture is needed in post-traumatic epilepsy. Outpatient treatment with chlorpromazine is also indicated if the patients exhibit any change in emotional stability.

USSR.

Use of a bacterial standard in applying the thymol turbidity test to the blood of donors. In January 1961, Dr. A. A. Mirkin, leading Soviet bacteriologist, ~~recommended~~ <sup>recommended</sup> that the thymol turbidity test be taken as a test for hepatitis. The test is now commonly carried out and is considered reliable. The results of the thymol turbidity test are compared with the results of the test for hepatitis. Matching with the thymol turbidity test is 95% to 98% probability of hepatitis owing to greater similarity between thymol and bacterial turbidity. Donors whose blood shows more than 4 units should not be used in view of probable hepatic involvement. A. Mirkin

AUTHOR: Vedeshnikov, V. A.; Volkov, A. F.; Zenkin, V. D.; Trapeznikov, V. A.; Turkovskaya, T. A.

TITLE: A digital computer with programmed circuit control. Class 42, No. 174844

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 18, 1965, 91-92

TOPIC TAGS: digital computer, automatic computer programming, self adaptive control

ABSTRACT: This Author Certificate introduces a digital computer with programmed circuit monitoring. The unit contains a control counter, instruction memory, instruction readout amplifier, instruction register, operation decoder, central control unit, control pulse amplifiers, arithmetic unit, working storage, and an input output device. The installation is designed for automatically and accurately finding elements that fail. The computer contains a microoperation zone decoder and a pilot signal shaper which are connected together and to the readout amplifiers for the instruction memory. The outputs from the pilot signal shaper are connected to the central control unit, the local control unit, and the control signal amplifier

Card 1/3

L 2645-66

ACCESSION NR: AP5025743

unit. The computer also contains a microcontrol unit which is connected to the central control unit and to the control signal amplifiers, and a device for recording the point of failure, which is connected to the instruction memory readout amplifiers. A modification of this computer is designed for transition from macrooperation to microoperation conditions to improve the resolution of diagnostic tests. The microcontrol unit in this computer contains the first gate for interpretation of operating conditions. The inputs to this gate are connected respectively to the unit for sampling commands from the instruction memory and to the flip-flop for storage of operating conditions. The output from this flip-flop is connected to a delay circuit through gates which are connected to the outputs from the microoperation zone decoders which correspond to microoperations for setting the flip-flops of the computer. The delay circuit is connected through a gating assembly to the outputs from the control signal amplifiers. The output from the delay circuit is connected to the input of the instruction sampler. The second gate for interpretation of operating instructions is connected to the input of the delay circuit. The inputs to this gate are connected respectively to the instruction sampler and to the inverse output from the flip-flop for storage of operating conditions through the gate for transition from macrocontrol to microcontrol conditions. The output from the delay circuit is connected in parallel with the output from the first gate for

Card 2/3.

ACCESSION NR: AP5025743

2

interpretation of operating conditions. In a second modification of this computer, the number of points which can be monitored is increased by using an input register in the microoperation zone decoder. This register is connected to the decoder, and the outputs from the decoder are connected to the control points. In a third modification of this computer, indication of a point of failure is simplified by using an input register in the failure indicator with binary-digital code for the number of the non-operative element. This register is connected to decimal indicators through a decoder which converts the register code into decimal positional notation. A fourth modification of this computer is designed for automatically and accurately indicating points of failure. The pilot signal shaper in this computer contains gates with inputs connected respectively to the microoperation zone decoder and to the readout amplifiers for the instruction memory. The outputs from these gates are connected to the elements to be monitored. [14]

ABSTRACT: Sovnarkhozes recently started the publication of new periodicals in the form of technical economic information bulletins, which deal with problems of technical progress in industry, and with the dissemination of latest experience. Brief information is given on a series of subjects which are treated in such bulletins issued by different sovnarkhozes.

metallurgical industry, transportation, electrification

PURPOSE AND COVERAGE: The book contains a popular description of  
the main practical problems in the development, and more rational  
placement, of production forces, solved by the Soviet regime. Using  
extensive factual material, the author deals with the main features  
of the present distribution of production capacity, problems of ter-  
ritorial distribution of the labor force electricity, oil, gas,

chemical industry, metallurgical industry, and manufacture of consumer goods. Much space is devoted to specialization and comprehensive development of the economy of large regions in the USSR. Ways are considered for accelerated development of the economy of the eastern zone of the USSR and for producing a unified transport system in the USSR. The book is intended for propagandists, students, secondary school teachers, listeners to the party-enlightenment network and to the active membership of the party organizations.

Title	:	Fat Losses in Buttermilk with Various Types of Cream Pasteurization Procedures	
Orig Pub.	:	Milchwissenschaft, 12, No 10, 394-397 (1957)	
Abstract	:	The authors report on semiplant scale comparison tests on the pasteurization of milk in film pasteurizers (FP) and drum pasteurizers (DP). It has been found that the fat content in the buttermilk obtained from the cream pasteurized in DP on the average is 0.25% higher than that in buttermilk from FP processed cream. Similar plant scale tests have shown a difference of 0.20%. Investigations of the fat globule diameters have shown that DP processed cream contains a considerable proportion of globules with diameters of under 1.6 microns. DP processing results in a partial disintegration of the fat

TITLE: Conditions of compactness of air pre-heaters with an intermediate heat carrier. (Usloviya kompaktnosti vozdukhopodogrevatelei s promezhutochnym teplonositel'm.)

PERIODICAL: "Energomashinostroenie" (Power Machinery Construction), 1957, No. 3, pp. 12 - 15, (U.S.S.R.)

ABSTRACT: The possibility of application in open cycle gas turbine plant of air pre-heaters with an intermediate heat carrier medium is considered and it is shown that, by using an intermediate heat carrier medium, it would be possible to reduce by 2 - 6 times the volume occupied by the heating surfaces. The author considers it advisable to specify a higher degree of regeneration for heat exchangers which have a higher heat transfer coefficient. Reduction of the dimensions of air pre-heaters could be achieved by using intermediate heat carriers with heat transfer coefficients above 1 000 to 2 000 kcal/m<sup>2</sup> hour °C and compact heating surfaces, with large areas (ribbed, etc.), with small dimensions on the gas side. The equations are derived on the basis of the simplified assumption that the water equivalents of the gases, of the air and of the intermediate heat carrier are equal. As intermediate heat carriers, the author considers certain silicon organic compounds (for temperatures up to 430 °C) suitable and gives data for tetra-cresyl oxysilane, and also liquid metals, for instance, Al - Ga alloys, stating that alloys containing

1014. CERTAIN REMARKS ON THE NEW DRUGS TROPACIN AND MESATON  
(Russian text) - Vedmedenko A. T. - VESTN. OFTALM. 1958 4(37-38)  
The study of new drugs promotes their wider introduction into clinical practice.  
Soviet drugs - 'mesaton' and 'tropacin' - were tested, both on experimental ani-  
mals and in the clinic. The effects of a 1% solution of 'mesaton' on the size of the  
pupil and intraocular tension were investigated. Results: a 1% 'mesaton' solution  
causes dilatation of the pupil up to 7-8 mm. after repeated instillations during 2-3  
min. This dilatation is retained for 5-6 hr. Intraocular pressure remains normal  
or is decreased to a certain extent (2-3 mm. Hg). 1-3-5% solutions of 'tropacin'  
cause late dilatation of the pupil (after 2-3 hr.), which is retained up to 48 hr. This  
solution has an irritating effect on the conjunctiva and cornea. The author recom-  
mends a 1% solution of 'mesaton' for dilatation of the pupil in out-patient depart-  
ments and in the hospital. 'Tropacin' is not recommended for that purpose.

TITLE: The Use of Plastics in the Manufacture of Measuring Instruments and Automats

PERIODICAL: Izmeritel'naya tekhnika, 1960, Nr 2, pp 1-3 (USSR)

ABSTRACT: This is a general discussion of the use of plastics in Soviet industry. At the Plenary Meeting of the TsK KPSS (Central Committee of CPSU) in June 1959, N.S. Khrushchev pointed out that the use of non-ferrous metals should be limited. Plastics are not yet widely used. In 1959, the Komitet stadartov, mer i izmeritel'nykh priborov pri Sovete Ministrov SSSR (The Committee of Standards, Measures and Measuring Devices at the Council of Ministers of the USSR) issued a handbook on plastics of organic origin, containing information on their characteristics and recommendations for their use. The article includes some brief digest-form information on the production

The Use of Plastics in the Manufacture of Measuring Instruments  
and Automats

of plastics in presses, the tools for cutting plastics, etc. It is mentioned that hydraulic presses of latest design are necessary for the production of instrument parts from plastics. The Soviet plants are producing the following presses: "PA-472A", "PV-474", and "P-476" having a nominal force of 63, 100 and 160 tons. They are provided with hydraulic ejectors, and their electric equipment is designed for semi-automatic work. The following casting machines are being manufactured: "LM-50", "LM-125", "M-500" producing parts of polymer plastics up to 500 gr. ✓
